

The Art of Entertainment

ORDER NO. **CRT1367** 

**HEAD UNIT** 

These models have been installed in LEXUS SC400 and SC300.

Model	Supplementary Model	Part No.	ID No.
KEX-M9161ZT/UC	KEX-M9161ZT-91/UC	86120-24220	P6800

Supplementary model is indentical to the original model except for the addition of following items.

Carton	CHG1592
Styrofoam (R)	CHP1273
Styrofoam (L)	CHP1274
Cover	CEG-236

- Dolby and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.
- Noise Reduction System manufactured under license from Dolby Laboratories Licensing Corporation.
- See the separate manual CX-156 (CRT-468) for the cassette mechanism description.
- If this equipment is not connected with the satellite switch, it is not possible to turn on and off the power supply for the radio nor adjust the volume. When repairing, be sure to connect the satellite switch jig to this unit.

### 1. SPECIFICATIONS

General

Power source ------ 13.2V (10.5 - 16.0V allowable)

Grounding system ..... Negative type

Dimensions ...... 183(W) × 125(H) × 175(D)mm

Weight ----- 2.4kg

**Tone Controls** 

(Bass) ..... ± 10dB (100Hz)

(Mid) ..... ± 10dB (1kHz)

(Treble) ..... ± 10dB (10kHz)

Tape player

Tape ····· Compact cassette tape

(C30 - C90)

Tape speed ······ 4.76cm/sec.

(+0.14cm/sec., -0.05cm/sec.)

Wow & flutter ..... Less than 0.15% (WRMS)

Crosstalk ····· More than 40dB

Stereo separation ..... More than 30dB

Signal-to-noise ratio

Dolby NR OUT ..... More than 40dB

Dolby NR IN ..... More than 45dB

FM tuner

Frequency range ·········· 87.9 - 107.9MHz

Usable sensitivity ...... 15 ± 6dB µV

Signal-to-noise ratio ...... More than 48dB

Distortion ····· Less then 1.5%

Stereo separation ..... More than 25dB

AM tuner

Frequency range ----- 530 - 1710kHz

Usable sensitivity  $\cdots 25 \pm 6 dB \mu V$ 

Usable selectivity ······ More than 30dB ( ± 9kHz)

Signal-to-noise ratio ...... More than 40dB

### 2. CONNECTOR FUNCTION DESCRIPTION

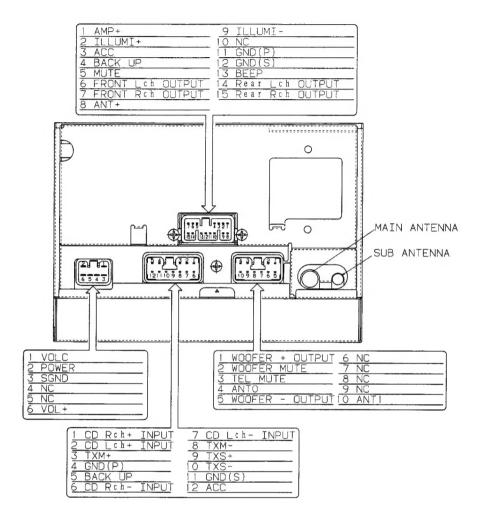

Fig. 1

## 3. DISASSEMBLY

### Removing the Case (Upper)

- Insert and turn a tweezers to remove the case.
- 2. Raise the case to remove.

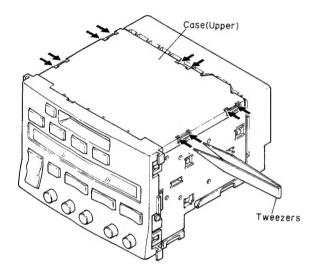

Fig. 2

## Removing the Cassette Mechanism Assy

- 1. Remove the four screws.
- 2. Disconnect the connector.
- 3. Remove the cassette mechanism assy.

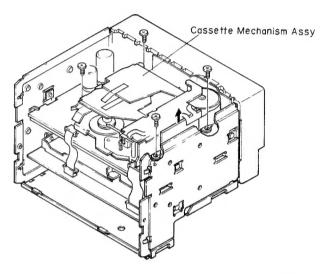

Fig. 4

### Removing the Grille Assy

- 1. Remove the two screws.
- 2. Press the tabs at four locations, and then pull out the grille assy.

## Removing the Case (Lower)

- 1. Insert and turn a tweezers to remove the case.
- 2. Raise the case to remove.

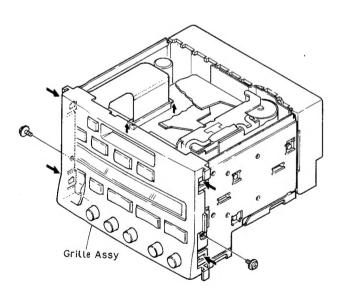

Fig. 3

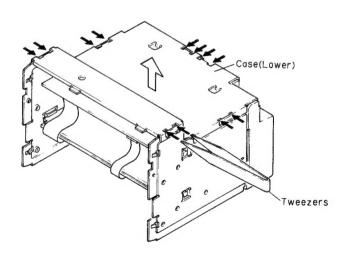

Fig. 5

#### Removing the Audio Section

- 1. Remove the six screws A.
- 2. Disconnect the two connectors, and then remove the audio section.

#### Removing the Control Unit

- 1. Remove the four screws B.
- 2. Disconnect the three connectors, and then remove the control unit.

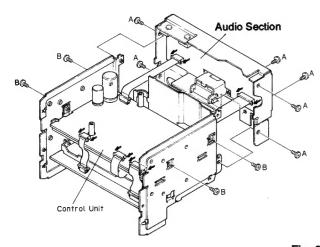

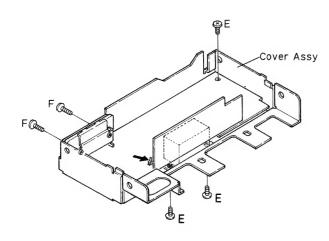

Fig. 6

Fig. 7

#### Removing the Cover Assy

- 1. Remove the three screws E and two screws F.
- 2. Unbend the tab at a location indicated by arrow until straight.
- 3. Remove the cover assy.

#### • Removing the Key Board

- 1. Remove the nine screws.
- 2. Disconnect the connector.
- 3. Remove the key board .

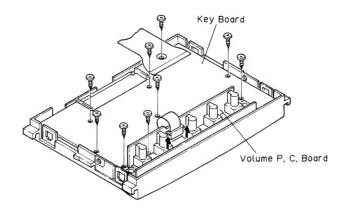

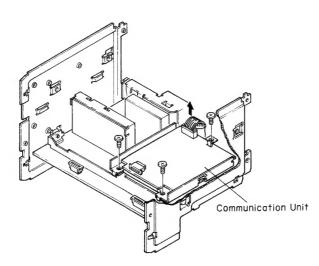

Fig 8

#### Removing the Communication Unit

- 1. Disconnect the connector.
- 2. Remove the three screws.
- 3. Remove the communication unit.

### 4. CIRCUIT DESCRIPTION

#### 4.1 CD COMPRESSION

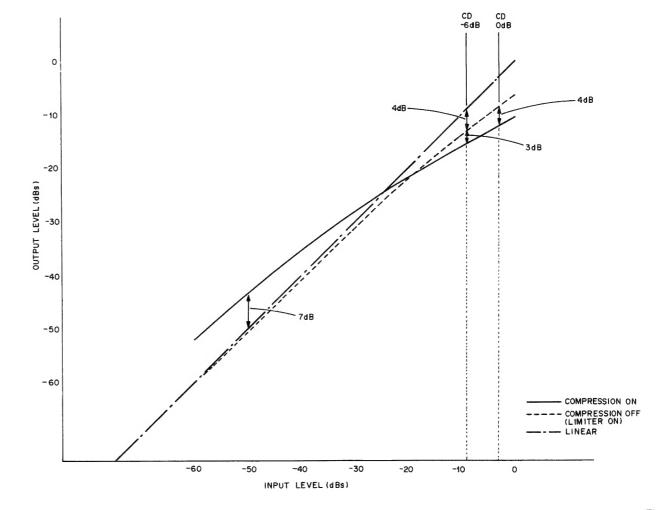

Fig. 10

#### • Compression "OFF"

Only the high volume portion of the CD (Compact Disc) sound is compressed.

#### Compression "ON"

When this function is "ON" it compresses the dynamic range by slightly magnifying the low volume sound and reducing the high volume sound. This is often desirable because a CD with a large dynamic range, such as a classical music CD, tends to make the high volume parts too loud when you adjust the overall volume to make the quieter parts loud enough.

Fig. 9

#### 4.2 BLOCK DIAGRAM

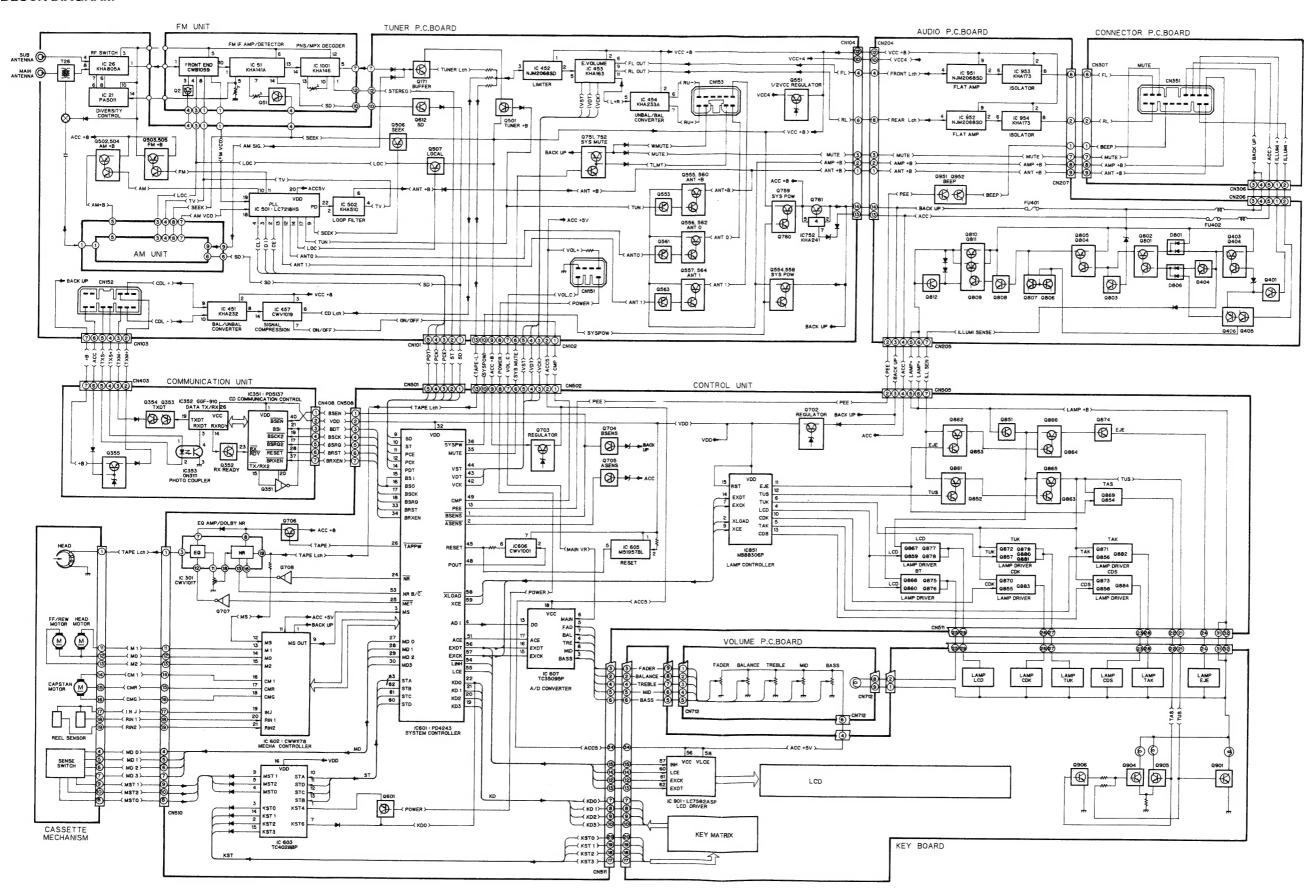

Fig. 11

### 5. GENERAL GUIDE

#### 5.1 RADIO

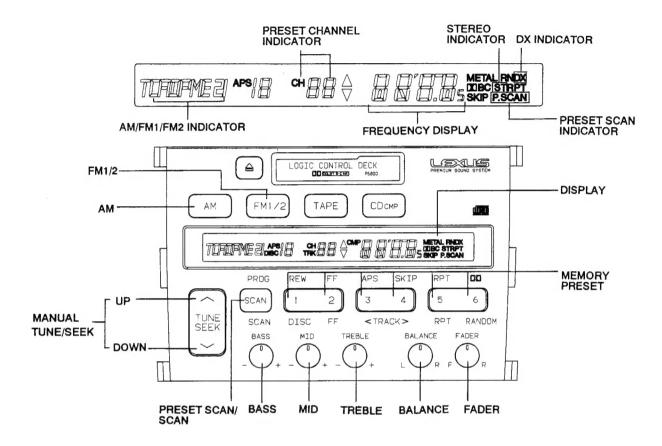

Fig. 12

#### Manual/Seek Tuning:

When the  $\land$  (up) side of the TUNE, SEEK button is pressed, and when the  $\lor$  (down) side is pressed, the frequency is decreased in the same way. Holding the button depressed for more than 0.5 seconds starts seek tuning, which stops when a station broadcasting a sufficiently strong signal is received.

When only weak signals or no station is received, the frequency returns to the initial frequency, then the reception is changed to the DX mode.

#### Memory Preset:

- Select the required band among the FM1, FM2, and AM bands.
- (2) Tune to the broadcast station required to be stored in memory...
- (3) Press and hold one of the Memory Preset button for more than 2 seconds.

- (4) A beep tone will be heard when the tuned station is stored in the memory corresponding to the Memory Preset button pressed.
- (5) Up to six stations can be memorized for each of the FM1, FM2 and AM bands.

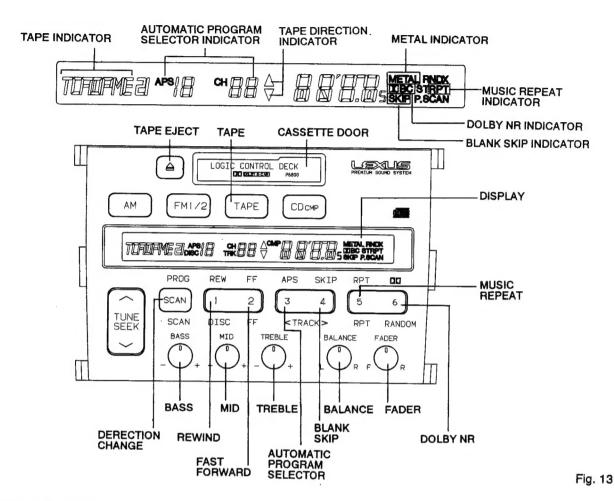

#### Preset Scan/Scan Tuning:

When the SCAN button is pressed, all the stations stored in the Memory Preset buttons will be received for 5 seconds in sequence.

When the SCAN button is held pressed for more than 2 seconds, the Scan Tuning mode is activated and station broadcasting strong signals will be received for 5 seconds in sequence. When the tuning returns to the frequency from which the Scan Tuning was started, the receiving mode is changed to the DX mode.

To release Preset Scan or Scan Tuning, press the SCAN button again.

#### 5.2 TAPE

#### Rewind/Fast Forward:

Press the REW (or FF) button to rewind (fast-forward) the tape, and press it again to release the function.

#### APS:

With the APS button, the beginning of any required tune up to 9 tunes before and after the current tune can be detected automatically. After pressing the APS button the number of times corresponding to the number of the tune to which you want to skip (for three times to select the 3rd tune), press the FF button to search in the forward direction or press the REW button to search in the reverse direction. The tape will stop at the beginning of the designated tune and play starts automatically.

(For example)

When the FF button is pressed after pressing the APS button three times, the tape is fast-forward by skipping two tunes in the forward direction, and play will start from the beginning of the 3rd tune.

#### Blank Skip:

With the SKIP button pressed ON, when a blank (non-

recorded) section of more than 15 seconds is detected, the tape is fast-forwarded to the beginning of the next tune. When the SKIP button is pressed again, the Blank Skip function is released.

#### • Music Repeat:

With the RPT button pressed ON, when the current tune is finished, the tape will be rewound to the beginning of the tune and play will restart automatically. When the RPT button is pressed again, the Music Repeat function is released.

#### Dolby Noise Reduction\*

Press this button when using a tape recorded with the Dolby Noise Reduction system.

Each press of this button shifts the Dolby NR mode as follows:

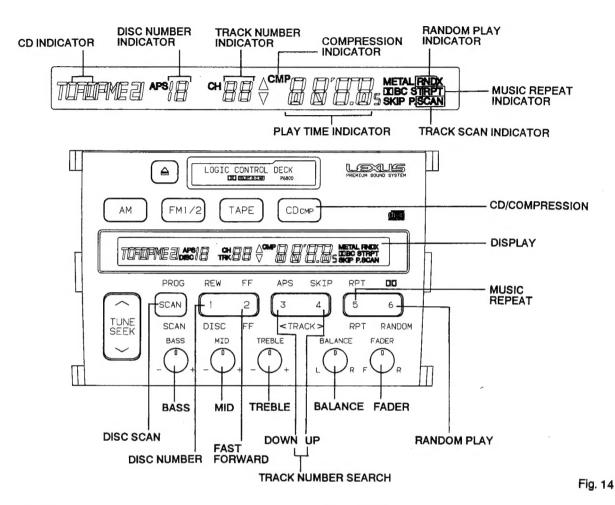

Laboratories Licensing Corporation.

#### Ejecting Tape:

The tape can be ejected at any time by pushing the TAPE EJECT button.

<sup>\*</sup> Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation. Dolby and the double-D symbol are trademarks of Dolby

#### 5.3 CD

#### Changing the Discs:

When the DISC button is pressed, the disc number is counted up, and the disc designated by the DISC button will be played. When the DISC button is held pressed for more than 0.5 seconds, the disc number is counted up continuously. If a tray with no disc in the magazine loaded in the CD changer is selected, the corresponding disc number will not be displayed.

#### Track Search:

When the TRACK < button is pressed, the track number is counted down and the designated track will be played. When the TRACK < button is held pressed for more than 0.5 seconds, the track number will be counted down continuously.

When the TRACK > button is pressed, the track number is counted up and the designated track will be played. When the TRACK > button is held pressed for more than 0.5 seconds, the track number will be counted up continuously.

#### CD Compression

To switch on the compression function, press this button while the CD is being played. Pressing the button again, will turn it off.

#### • Fast Forward:

The playing position is fast-forwarded while the FF button is pressed. During fast-forwarding, playback sound can be heard.

#### • Music Repeat:

When the RPT button is pressed, the current track will be played repeatedly. Press the RPT button again to release the Music Repeat function.

#### • Random Play:

When the RANDOM button is pressed, the track to be played next will be selected automatically by the built-in microcomputer.

#### • Disc Scan:

When the SCAN button is pressed, the beginning of all the tracks on the discs loaded in the CD changer will be played for 10 seconds in sequence. When play returns to the disc from which Track Scan was started, Track Scan will be released. To release the Track Scan function during its operation, press the SCAN button again.

## 6. ADJUSTMENT

#### Notice:

Select C1 so that total capacity of 80pF is attained from the direction of the receiver jack.

Z:Output impedance of the SSG.

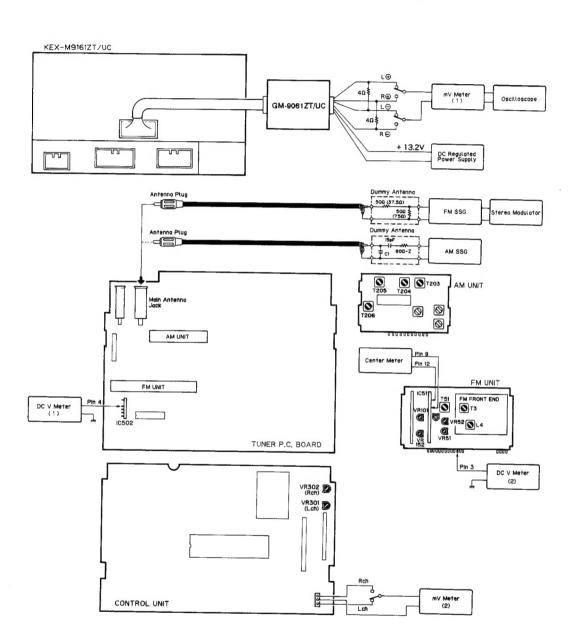

Fig. 15

#### DOLBY NR ADJUSTMENT

No.	Cassette Tape	Adjusting Point	Adjustment Method (Switch Position)
1	NCT-150 (400Hz, 200nwb/m)	VR301 (Lch) VR302 (Rch)	mV Meter(2):388mV(-6dBs) (DOLBY NR Switch:OFF)

#### AM ADJUSTMENT

	No.	AM \$56 (400	Hz. 30% )	Displayed	Adjusting	Adjustment Method
	NO.	Frequency (kHz)	Level(dBμV)	Frequency (kHz)	Point	(Switch Position)
Tun-	1			530		Verify that DC V Meter (1) is 1.0±0.3V
Volt	2			1, 710		Verify that DC V Meter (1) is 6.0 ± 0.5V
	3	600	2 5	500	T203, 204, 205, 206	mV Meter(1):Maximum
SEEK	1	1.000	35±8	1, 000		Verify that SEEK stops. SEEK stops level:AdB
	2	1.000	A + 22 ± 5	1, 000		Verify that SEEK stops.

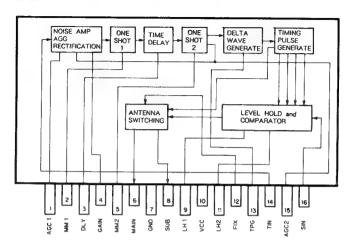

#### FM ADJUSTMENT %1 Stereo MOD.: 1kHz, L+R=90%. Pilot=10%

	N.	FM \$5G (400	Hz. 100%)	Displayed	Adjusting	Adjustment Method

#### • ICs

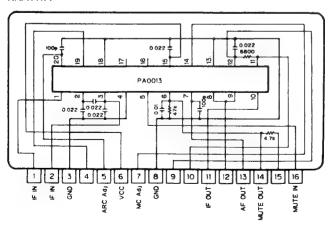

#### PA5011

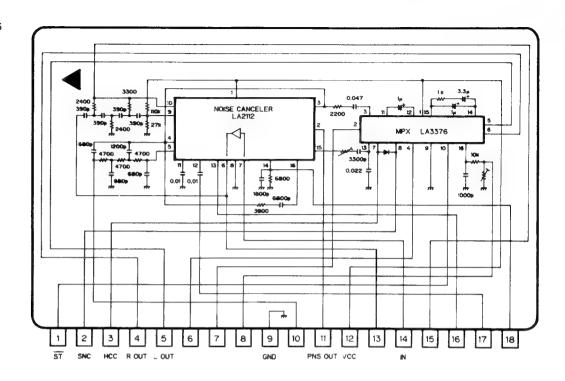

### • Pin Functions (PA5011)

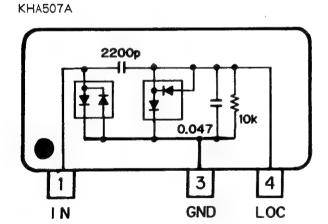

Pin No.	Pin Name	I/O	Functions and Operation
1	AGC1		Connected to gain control, noise amplifier AGC1 CR.
2	MM1		Connected to MMV1 output pulse width setting capacitor.
3	DLY		Connected to time delay setting capacitor.
4	GAIN		Connected to noise amplifier gain setting CR.
5	MM2		Connected to MMV2 output pulse width setting capacitor.
6	MAIN	0	"L" when the main antenna is selected.
7	GND		
8	SUB	0	"L" when the sub antenna is selected. Output phase is the opposite of that of the main antenna. Open corrector output.
9	LH1		Connected to level hold 1 capacitor.
10	VCC		
11	LH2		Connected to level hold 2 capacitor.
12	FiX	ı	Auto mode when open. Fixed at main antenna when connected to GND. Fixed at sub antenna when connected to VCC.
13	TPG		Connected to timing pulse generation capacitor.
14	TIN	ı	Noise amplifier input terminal. The tuner signal meter output signal passes through a capacitor and is input.
15	AGC2		Connected to noise amplifier AGC2 CR.
16	SIN	1	Level hold circuit input terminal. Tuner signal meter output signal is input.

#### NOTE:

- The parts marked with "@" may need long time to supply and their supply is subject to refuse as the case may be.
- Because the parts with encircled number shown on the dismantling drawing are not spare parts, we are unable to supply them in principle.
